

SKILLS

Specific roles will require different knowledge and abilities. There are also overarching skills and characteristics which we look for at EMEC to continue to create a dynamic company culture that keeps the pace with the industry we work within:

- Completer-finisher
- Ability to work alone or as part of a wider team and across business areas
- Positive attitude
- Enthusiastic about renewable energy and a greener future!
- Proactive approach to work and learning
- Good communication skills
- IT literacy with MS office package

QUALIFICATIONS

Most of our vacancies tend to ask for degree level qualification as standard, however, the type of degree or discipline would depend entirely on the role being advertised. For instance, some of our roles require HND level or above in a particular subject.

In any case, if you have relevant experience or a strong transferrable skill set, please reach out to us and apply to our vacancies! As an innovation organisation, we will read between the lines and see beyond degree qualifications, if your experience and skill set matches the needs of the post. Also – please continue to apply even if you believe you don't tick every box in the vacancy description – very few people often do, and you could bring new approaches to a role which we might not have thought of. If ever in doubt, please give us a call – every vacancy will include a contact number of the relevant line manager, and we genuinely welcome an informal chat in case you would like more background on the role.

Dependent on the role, some additional qualifications in the form of first aid, on-site certification such as sea survival, project management, etc. can be beneficial, though often we can provide this training when necessary.

OPPORTUNITIES

Dependent on funding and availability, we offer summer internships for a duration of three months that usually run between June and August. Details of these are displayed on our website in the first instance. We also offer graduate vacancies as and when they arise / when funding is available.
